

MANTEC serves the manufacturers of South Central Pennsylvania as a trusted partner in their efforts to strategically and continuously strengthen their businesses.

Were you affected by the Flood of 2011?

The flooding of our region has been officially declared as a disaster, and MANTEC wants to reach out to assist affected manufacturing firms.

Following is how we can assist:

- Matching the needs of impacted companies with resources that can provide support.
- For companies which have experienced downtime, we will identify companies which may be able to provide interim production capacity.
- DCED, the Governor's Office, PEMA and FEMA are all mobilizing to offer support which we can draw upon if necessary.

If you are a manufacturer in need of assistance or are able to provide assistance to those affected please email FloodHelp@mantec.org. We will do all we can to match available resources with immediate needs.

Disaster Recovery and Business Continuity Plan

Whether your business was directly affected by the recent flooding or whether you have only heard of the struggles faced by other companies, the events of the past few weeks serve as a stark reminder that without a Disaster Recovery and Business Continuity Plan in place and updated regularly, you are only one event away from a major interruption that could set you back years or even put you out of business entirely. Don't play the "it won't happen to me" gamble, and don't choose to be left helpless and wondering, "what do we do now?"

MANTEC can help you protect your company's future by creating and maintaining a customized Disaster Recovery and Business Continuity Plan. Through the application of a proven, systematic approach, MANTEC will help ensure you have a prioritized action plan in place and ready to activate when a significant event strikes your company, the region, or your key suppliers. Having a plan can help position your company to return to "normal" operations faster and emerge from a disaster stronger than your competitors. Additionally, MANTEC's process helps expose vulnerabilities so you can proactively mitigate risk. To start a discussion about how MANTEC can help you be better prepared for the unexpected, contact us.
